MMA21 — ALGEBRA II

Time : Three hours

Maximum : 75 marks

SECTION A — (5 × 6 = 30 marks)

Answer ALL questions.

1. (a) Prove that the element  $a \in K$  is algebraic over  $F$  if and only if  $F(a)$  is a finite extension of  $F$ .

Or

- (b) If  $\alpha \in K$  is algebraic of degree  $n$  over  $F$  prove that  $[F(\alpha) : F] = n$ .
2. (a) Prove that a polynomial of degree  $n$  over a field can have at most  $n$  roots in any extension field.

Or

- (b) If  $p(x)$  is irreducible in  $F[x]$  and if  $v$  is a root of  $p(x)$  prove that  $F(v)$  is isomorphic to  $F[t]$  where  $\omega$  is a root of  $p'(t)$ .

3. (a) If  $K$  is finite extensions of  $F$  prove that  $G(K, F)$  is a finite group and its order  $o(G(K, F))$  satisfies  $o(G(K, F)) \leq [K : F]$ .

Or

- (b) Let  $K$  be the splitting field of  $f(x)$  in  $F[x]$  and let  $p(x)$  be an irreducible factor of  $f(x)$  in  $F[x]$ . If the roots of  $p(x)$  are  $\alpha_1, \alpha_2, \dots, \alpha_r$ , prove that for each  $i$  there exists an automorphism  $\sigma_i$  in  $G(K, F)$  such that  $\sigma_i(\alpha_1) = \alpha_i$ .
4. (a) Suppose that the field  $F$  has all  $n$ th roots of unity and suppose that  $a \neq 0$  is in  $F$ . Let  $x^n - a \in F[x]$  and let  $K$  be its splitting over  $F$ . Prove that
- (i)  $K = F(u)$  where  $u$  is any root of  $x^n - a$
- (ii) The Galois group of  $x^n - a$  over  $F$  is abelian.

Or

- (b) State and prove Jacobson theorem.
5. (a) Let  $C$  be the field of complex numbers and suppose that the division ring  $D$  is algebraic over  $C$ . Prove that  $D = C$ .

Or

- (b) Prove that every positive integer can be expressed as the sum of squares of four integers.

SECTION B — (3 × 15 = 45 marks)

Answer any THREE questions.

6. (a) If  $L$  is a finite extension of  $K$  and if  $K$  is a finite extension of  $F$  prove that  $L$  is a finite extension of  $F$
- (b) If  $a$  and  $b$  in  $K$  are algebraic over  $F$  of degree  $m$  and  $n$  respectively prove that  $a \pm b, ab$  and  $a/b$  are algebraic over  $F$  of degree at most  $m, n$ .
7. If  $F$  is of characteristic 0 and if  $a, b$  are algebraic over  $F$  prove there exists an element  $c \in F(a, b)$  such that  $F(a, b) = F(c)$ .
8. State and prove the fundamental theorem of Galois theory.
9. Prove that a finite division ring is necessarily a commutative field.
10. State and prove Frobenius theorem.
